## PROFESSIONAL SUMMARY

Product-focused IT professional with 15 months of enterprise experience and two self-initiated Android apps in Google Play closed testing. Built reporting automation that reduced preparation from an estimated 30-60 to ~5 minutes per run. Experience spans MVP scoping, UX thinking, SQL/Power BI analysis and technical delivery.

## PROFESSIONAL EXPERIENCE

### Assistant System Engineer | Tata Consultancy Services (TCS) | May 2024 - Aug 2025

Enterprise technology operations | Mumbai | Banking client environment

- Identified repetitive server/database reporting for a ~10-person team; independently built an on-demand Linux shell-script workflow generating stakeholder-readable HTML reports and reducing preparation time by an estimated 83-92% per run.
- Developed SQL extraction workflows and Excel/Power BI reports for CPU and storage utilization, supporting recurring infrastructure reporting and technical stakeholder decisions.
- Investigated production incidents using system logs and evidence, documented findings, and coordinated operational changes in an SLA-driven environment.

## INDEPENDENT PRODUCT PROJECTS

### HomeyB | Product Definition & Android Development | Sep 2025 - Present

Self-initiated product with co-founder collaboration | Google Play closed testing

- Led MVP scope, PRD, user journeys, acceptance criteria and screen-level interaction decisions; developed nearby discovery, Interest Hives, local posts and consent-based connections with React Native, TypeScript, Firebase and H3 geolocation.
- Prioritized approximate location, foreground-only presence and blocking/reporting for privacy and safety; investigated misleading location-verification failures through flow tracing and error analysis.
- Collaborated on feature feedback, two-device UAT and release readiness; designed activation, publishing-reliability and useful-interaction metrics for beta evaluation (results not yet established).

### Parky | Independent Android Product Builder | Mar 2026 - Present

Self-initiated product | Google Play closed testing

- Scoped, built and device-tested an offline-first parking assistant with GPS accuracy guidance, parking notes/photos, compass direction, local history and Android shortcuts using React Native and TypeScript.
- Selected explicit save over background detection, local-only storage over cloud accounts and offline guidance over embedded maps to reduce friction, privacy exposure and operating costs.

## SKILLS

Product management & UX: Problem framing, MVP scoping, PRDs, user stories, acceptance criteria, prioritization, user journeys, interaction design, wireframing, prototyping

Analytics & experimentation: SQL, Excel, Power BI, DAX, Power Query, KPI/funnel definition, Firebase Analytics, A/B test design (case study), root-cause analysis, unit economics

Delivery & technical: Usability testing, UAT, stakeholder reporting, Jira (familiar), Agile/Scrum, Python (intermediate), Linux/shell, React Native, TypeScript, Firebase, Git/GitHub

## EDUCATION

B.E., Information Technology | Bharati Vidyapeeth College of Engineering, Navi Mumbai | 2019 - 2023
